

Job Opening

An inspiring, rewarding and challenging job is waiting for you at Organ Assist. Through our products, we aim to enable more and better quality donor organs to become available for transplantation. More and more hospitals worldwide start implementing our products. Organ Assist has a mission to stay on the forefront of making innovative products and developments available in the life changing field of organ transplantation. We therefore aim to secure our existing market and expand to new markets. To ensure this strategy, we will extend our multi-disciplinary product support team and are looking for an enthusiastic new colleague. Do you share our passion to make the difference?

Bornholmstraat 84
9723 AZ Groningen
The Netherlands
+31 (0) 50 313 19 05
www.organ-assist.nl

Your function:

Field Service and Test Engineer

Your activities:

- You will be responsible for managing, performing and documenting preventive and corrective maintenance on our devices in the field.
- You will be responsible for managing, performing and documenting the root cause analysis and repair process of devices the field.
- You will be responsible for defining, performing and documenting in-house verification and validation tests on new products or product updates.
-

Your profile:

- We are looking for an experienced service and test engineer with a technical background (e.g. electro-mechanical engineering or comparable).
- You have a natural affinity with the medical field.
- You have excellent analytical skills in understanding and interpreting complex electro-mechanical systems.
- Bachelor of Science (BSc) degree is preferred.
- Proven English communication skills (spoken and written).
- Willingness to travel (~ 40%)

Our offer:

- Ability for you to make the difference (i.e. more transplantations, better quality of life for our patients).
- Energetic, dynamic and innovative working environment.
- Office location in Groningen, The Netherlands.
- Competitive working conditions.
